1. Sensitivity Point. Heavy load may increase the system latency
2. Risk. Account creation should be an ASR of the Authentication attribute refinement.
3. Risk. User Login should be an ASR of the Authentication attribute refinement.
4. Risk. Input validation has not being included in any ASR.
5. Risk. Item addition has not being included in any ASR.
6. Non-risk. Should be handled by shared storage.
7. Non-risk. Should be handled by shared storage.

Utility

Quality Attribute	Performance		Security				Interoperability	
Attribute Refinement	Latency	Authentication		Authoritazation			Shared Storage	Accesibility
Architecturally Specific Requirement	It takes less than 1 second to complete any given task. (H)	A user must create or have an account to use the app. (H)	A user can create an account using a username and email. (H)	A user must create or have an account to use the app. (H)	A user cannot place a bid on their own items. (M)	User input must be validated (H) / User can add valid items to their items (H)	User data must be in shared storage. (H)	Users can access their data from the Sharing Mobile App (H) / Users can access their data from the Sharing Web App (H)
